July 2007

Forty-nine percent of Wyoming land, or 29.89 million acres, is owned and managed by the federal government. Federal lands are not subject to property taxes that support county governments and education; yet, local communities play an important role in supporting the management of federal lands. Campbell County is 13 percent federally owned. In 1976, Congress authorized federal land management agencies to share income with states and counties and provided a payment in lieu of taxes (PILT) program to help offset lost tax revenue.

Overall, PILT payments to Wyoming counties increased 2.58 percent from 2005 to 2006 (\$14,810,770 to \$15,192,700). Campbell County PILT payments increased 0.17 percent in 2006 from \$343,904 to \$344,493. Table 1 shows how Campbell County 2006 PILT payments were calculated.

The procedure used to calculate PILT payments is a function of federal revenues, revenue sharing, and population. For a detailed explanation, see University of Wyoming Cooperative Extension Service Bulletin B-1055. A simplified procedure is presented below.

PILT payments are based on three factors:

- Eligible federal acres in the county
- Federal revenue-sharing going to the county in the prior year
- County population up to the pre-determined ceiling

These factors are used in a process of two calculations — a standard and a minimum. The different calculations are compared to each other in an approach similar to that of federal income taxes. Instructions direct the use of the smaller or larger of two numbers. The Minimum Method Calculation is used when significant revenue sharing in the previous year would mean no PILT in the current year for the county. The main difference between the Standard and Minimum Method Calculations is that the Minimum Method uses a different per-acre rate and does not take into account the prior year's revenue sharing payments.

I. Standard Method Calculation

- A. Eligible acres x standard rate – prior year's federal revenue sharing = estimated PILT payment
- B. Estimated PILT payment is compared to the county population ceiling amount.
- C. Using the Standard Method, the estimated payment is the **smaller** of the two amounts in B.

II. Minimum Method Calculation

- A. Eligible federal acres x minimum rate = estimated PILT payment
- B. Estimated PILT payment is compared to the county population ceiling amount.
- C. Using the Minimum Method, the estimated payment is the **smaller** of the two amounts in B.

III. The estimated payments for the Standard and Minimum Methods are compared, and the **larger** of the two amounts is the PILT payment.

IV. Congress must authorize funding for PILT. In recent years, funding has not been at the 100 percent level. In 2006, Congress authorized a pro-rated share (67.5 percent) of PILT payments be paid to counties.

* The authors are an associate research scientist, associate professor, and professor, respectively, in the University of Wyoming Department of Agricultural and Applied Economics.

Using the Standard Method, prior year's revenue sharing only counts federal payments going directly into the county general fund. In Wyoming, this currently applies to 95 percent of the U.S. Forest Service's (USFS) 25 percent payments. (*The USFS pays 25 percent of a national forest's annual revenues to the state for forest lands within each county. The state, in turn, distributes these funds back to the counties for general expenditures. State statutes mandate that a minimum of 5 percent of these funds must be used for education and roads.*)

Another way to look at PILT payments is through effective payment per entitlement acre. This measure shows what the county received on a per acre basis for the year. Campbell County received \$.93 per acre in 2006. This value will change year to year based on a number of variables, including entitlement acres, per capita rate, population, and the prorated share.

For more information on PILT payments to Wyoming counties, visit the Wyoming Economic Atlas at: [/agecon.uwyo.edu/EconDev/PILT1.htm](http://agecon.uwyo.edu/EconDev/PILT1.htm).

Table 1. Calculations for Campbell County, Wyoming, PILT payments.

Campbell			
Standard Method Calculations		Minimum Method Calculations	
Acres of entitlement land	371,093	Acres of entitlement land	371,093
Multiplied by dollars per acre (standard)	\$2.15	Multiplied by dollars per acre (minimum)	\$0.30
Subtotal	\$797,849.95	Subtotal	\$111,327.90
Subtract prior year's payments	\$287,141.00		
<u>Estimated payment based on acreage</u>	<u>\$510,708.95</u>	<u>Estimated payment based on acreage</u>	<u>\$111,327.90</u>
Compared to:		Compared to:	
Population unit	37,000	Population unit	37,000
Multiplied by unit per capita rate	\$66.83	Multiplied by unit per capita rate	\$66.83
Subtotal	\$2,472,710.00	Subtotal	\$2,472,710.00
Subtract prior year's payments	\$287,141.00		
<u>Est. payment population limited</u>	<u>\$2,185,569.00</u>	<u>Est. payment population limited</u>	<u>\$2,472,710.00</u>
Does the population ceiling apply?	No	Does the population ceiling apply?	No
Smaller of Standard Method Calculations	\$510,708.95	Smaller of Minimum Method Calculations	\$111,327.90
		Larger of Standard or Minimum calculations	\$510,708.95
		Congressionally mandated pro-rated share	0.674539
		<u>Net payment to county</u>	<u>\$344,493.00</u>
		Effective payment per entitlement acre	\$0.93
